

InterControl and Device Insight announce strategic technology partnership

***digsy*[®] Telematics platform launched at BAUMA 2007**

Munich, 24. April 2007 - InterControl and Device Insight entered into an strategic cooperation agreement to jointly develop advanced telematics solutions for InterControl's *digsy*[®] controller product line.

At the heart of the innovative telematics solution, Device Insight's **CenterSight**[®] M2M application platform will be combined with InterControl's *digsy*[®] hardware and programming software.

Wireless data communication will a.o. be realized by RS232, CAN and ETHERNET. Beside advanced remote service and advanced fleetmanagement functionality based on UMTS/GPRS/GSM resp. GPS – technology, innovative after sales, manufacturer service & preventive maintenance services will be offered by the partners in future.

The partners choose InterControl's latest *digsy*[®] MTC controller as first product to be offered with the new telematics platform.
