PRESS RELEASE

Device Insight at Hannover Messe 2019

Smart solutions for the Industrial Internet of Things

+ Condition monitoring, analysis and machine learning in real time
+ Device Insight is exhibitor on the Microsoft booth
+ IoT pioneer looking back on 15 years of industry experience
+ Get free tickets for Hannover Messe 2019

Munich, March 18, 2019 – Device Insight will demonstrate at Hannover Messe 2019 how the interaction of humans, machines and analytics can open up new potentials for industry. Hannover Messe has been closely associated with the Munich-based IoT pioneer throughout its 15-year company history. As far back as 2004, Device Insight presented its own IoT platform CENTERSIGHT® at the trade show for the first time.

“Integrated Industry – Industrial Intelligence” is the motto of this year’s Hannover Messe, bringing together exhibitors and visitors from around the world on 5 days from April 1–5, 2019. The Munich-based IoT pioneer Device Insight's appearance at the fair will put this motto into practice, making the Industrial Internet of Things tangible. As one of Microsoft's partners exhibiting on the Microsoft booth, Device Insight will demonstrate live just how machine learning and data analysis can lead to more efficient robot solutions.

Focus on interaction between humans, robots and analytics

Visitors can experience first-hand how Device Insight's IoT platform CENTERSIGHT® can document the operation of the collaborative KUKA robot and determine recommendations for action based on data analysis. The potential that can be unlocked through targeted data analysis is enormous for operators and users of an industrial robot solution. Device Insight demonstrates just how the cloud-based solution is able to support users in lowering the amount of defective items or how machine learning algorithms are able to predict the ideal service time in the sense of predictive maintenance. In this way, service efforts can be reduced drastically and production downtimes can be avoided.

Device Insight has been a Microsoft partner since 2017 – reaching Gold partner status in October 2018 – and operates its IoT platform CENTERSIGHT® on Microsoft's cloud platform Azure. Customers can profit first and foremost from strong scalability, global availability and
seamless integration of powerful IoT platform services such as Azure IoT Hub and Azure Machine Learning.

15 years pioneering in the Internet of Things

Device Insight has always had close ties to Hannover Messe throughout its own 15-year company history: back in 2004, the company first presented its IoT platform CENTERSIGHT® at the trade show. Now, 15 years later, Device Insight is able to look back on an unbroken positive development track record: from its beginnings as one of the first providers of machine-to-machine-communication, the company has continually developed and reinvented itself, including the continued expansion of its flagship product CENTERSIGHT®, featuring new solutions in the areas of big data analytics, artificial intelligence and augmented reality also including cooperation with strong partners from industry as well as the IT and ITC industries. With its 100 employees, Device Insight does not just belong to the forerunners in IoT/IIoT, but also to German mid-sized “Growth Champions”.

Device Insight also recently celebrated another milestone with the successful relaunch of its website. The company is now able to present itself and its services thanks to an all new, modern interface.

Meet Device Insight’s experts at Hannover Messe – in person and in live demos. We look forward to seeing you in hall 7 / booth C40. Get your personal free ticket for Hannover Messe 2019 with the code HMCUST here.

About Device Insight GmbH

Founded in 2003, Device Insight GmbH is a leading provider of Internet of Things platforms, accompanying companies in their digitalization and in the environments of Industry 4.0 and IoT. Its flagship is its cloud based IoT platform CENTERSIGHT®, a platform that supports the global networking of machines, vehicles, facilities and devices as well as providing data acquisition, reporting, remote services and alerting. Device Insight works in over 15 countries worldwide with large enterprises and mid-size customers from various sectors, including machinery and plant engineering, HVAC, commercial vehicles, vending, transport, energy as well as the Connected Home sector. Device Insight’s services range from Business Case analysis and implementation to safe IT operations. Device Insight is committed long-term to its customers in realizing IoT projects and as a full-service consultant regarding all IoT Ecosystem components. In 2018, the company received the award “Internet of Things (I4.0) Leader Germany 2018” from “ISG Provider Lens – Germany 2018” for the third time in a row. In its “IoT Survey 2019”, tekknowlogy Group ranked Device Insight amongst the leaders in the areas of Business Value, Visualization and Flexibility.
